PROFESSIONAL SUMMARY

Full-Stack Developer and Product Builder focused on privacy-first tools, bilingual web products, automation workflows, and practical AI-assisted internal systems.

My background combines technical support, digital marketing, and self-directed software development. Technical support taught me how systems fail, how users struggle, and why reliability matters. Digital marketing taught me how people think, how attention works, and why useful products need clear communication.

Today, I build practical digital systems: browser-based tools, bilingual web products, evidence-based research workflows, local AI-assisted tooling, and private backend/data workflow experiments. My work focuses on turning scattered processes into clear, maintainable, usable systems.

TECHNICAL SKILLS

Frontend: TypeScript, React, Vite, Tailwind CSS, Three.js, Next.js, Responsive UI, RTL/LTR interfaces, component-based UI, Browser APIs

Backend & APIs: Python, FastAPI-style APIs, REST API design, data processing, backend workflow design

Databases & Infrastructure: PostgreSQL, Redis, Docker, GitHub, GitHub Actions, Vercel, deployment workflows

Automation & AI Workflows: Workflow automation, AI-assisted workflows, MCP-style tooling, local AI workflows, memory systems, knowledge routing, agent coordination patterns

Product & Operations: Product thinking, technical documentation, evidence workflows, user workflows, SEO, digital marketing, email marketing, analytics

Support & Systems: Technical support, network troubleshooting, remote desktop support, hardware/software diagnostics, user access management

SELECTED PROJECTS

QuickShed v0.7.0 | *Privacy-first browser-based utility product* | quickshed.vercel.app | github.com/Habib1001-m/quickshed

- Built a privacy-first browser-based utility product for developers and technical users, focused on client-side processing and practical text/data workflows.
- Designed around bilingual Arabic/English usage and fast access to everyday developer utilities.
- Current work is moving toward a newer v0.7.0 release; fixed tool-count claims are intentionally avoided until the new release is finalized.
- Maintained public live deployment and GitHub repository presence.

Technologies: Next.js, TypeScript, Tailwind CSS, PWA, Browser APIs

Mohamed Habib Portfolio | *Bilingual personal portfolio* | mohamed-habib-portfolio-opal.vercel.app |

github.com/Habib1001-m/mohamed-habib-portfolio

- Built a modern single-page portfolio using React, TypeScript, Vite, Tailwind CSS, and Three.js.
- Implemented Arabic/English language support with RTL/LTR direction handling.
- Designed sections for hero, about, projects, experience, stack, interactive systems lab, and contact.
- Used GitHub Actions and Vercel deployment workflow.
- Improved the site through audit-driven sprints: mobile navigation, language preference persistence, project link cleanup, Open Graph metadata, hero typography, and compact 3D systems lab positioning.

Technologies: React, TypeScript, Vite, Tailwind CSS, Three.js, GitHub Actions, Vercel

SIEVE Research OS | *Evidence-based research and decision workflow*

- Designed an evidence-based workflow concept for organizing research, screening, evaluation, and governance around complex topics.
- Structured complex research into clearer phases, criteria, review logic, evidence trails, and decision gates.
- Treated as an internal/project system until public screenshots, repository evidence, or demo material are ready.

Technologies: TypeScript, React, Vite, dashboards, data tables, evidence workflows

Note: Use as a supporting project in CV/LinkedIn. Promote to a primary public case study after screenshots or demo evidence are prepared.

AI-assisted Workflow Systems | *Internal tooling and workflow experiments*

- Explored ways to make AI tools useful inside structured workflows rather than isolated chat sessions.

- Worked with local workflow patterns involving memory, evidence, orchestration, and tool-assisted operations.
- Focused on traceability, decision support, and practical automation.

Technologies: Python, MCP-style tooling, local AI workflows, memory systems, workflow automation

Note: Present as internal AI-assisted workflow systems unless public screenshots, repositories, or sanitized architecture diagrams are available.

Private Event-driven Research Systems | *Backend/data workflow experiments*

- Explored backend workflow patterns using Python and FastAPI-style architecture.
- Worked with queue, caching, and database thinking across data and decision workflows.
- Focused on clarity, recoverability, and observable process design.

Technologies: Python, FastAPI-style APIs, PostgreSQL, Redis, queues, Docker

Note: Use private backend/data workflow experiments rather than trading platform unless public proof is prepared.

PROFESSIONAL EXPERIENCE

Product Builder & Independent Developer | *Self-Employed, Cairo, Egypt | 2022 - Present*

- Built and deployed a bilingual personal portfolio using React, TypeScript, Vite, Tailwind CSS, Three.js, GitHub Actions, and Vercel.
- Built QuickShed, a privacy-first browser-based utility product focused on client-side workflows and bilingual Arabic/English support.
- Designed SIEVE Research OS as an evidence-based research and decision workflow.
- Worked on internal AI-assisted workflow systems involving MCP-style tooling, memory systems, knowledge routing, and agent coordination.
- Explored private backend/data workflow systems using Python, FastAPI-style architecture, Redis/PostgreSQL patterns, and event-driven thinking.
- Used product thinking from digital marketing and systems reliability thinking from technical support to build around real workflows rather than demos.
- Iteratively improved projects through audit, review, evidence collection, and implementation sprints.

Digital Marketing Specialist | *Freelance, Egypt | Nov 2020 - Present*

- Worked across content strategy, SEO/SMO, email marketing, analytics, and digital campaign execution.
- Researched content and audience behavior to improve relevance and engagement.
- Developed content strategies aligned with target audience needs and marketing goals.
- Created and managed content across blogs, websites, social media, and email.
- Built a practical understanding of user attention, conversion paths, messaging, and product communication.
- Applied marketing background to current product-building work by focusing on user value, clarity, and workflow fit.

Senior Technical Support Specialist | *Orange, Egypt | Jan 2016 - Jan 2020*

- Troubleshoot network connectivity, network printing, hardware, software, and user access issues.
- Provided remote desktop support and user-facing technical assistance.
- Diagnosed hardware and software problems across operational environments.
- Managed user and computer accounts and helped resolve access-related issues.
- Built practical understanding of system reliability, troubleshooting workflows, escalation paths, and user-facing technical issues.

EDUCATION

Bachelor of Arts - English / Language Arts Teacher Education, Faculty of Arts, 2009

Digital Marketing Professional Nanodegree - Udacity

Computer Systems Networking and Telecommunications - Microsoft

CERTIFICATIONS

- Microsoft Certified IT Professional
- Microsoft Certified Technology Specialist
- Social Media Marketing & Email Marketing
- Creative Thinking: Techniques and Tools for Success
- The Arts and Science of Relationships: Understanding Human Needs
